CUSTOMER CHURN

Oliwia Iwańska

RISK DRIVERS

Tenure

Customers in their first 3 months have 4-9x higher churn than longer term users. They haven't build loyalty and are still evaluating the platform.

First-90-day onboarding is the bigger level for retention.

Complaints

Customers who raised a complaint churn 3x more often. The frustration is already there, resolution speed determines whether they stay

A 24h complain resolution + goodwill coupon can filp this signal.

Cashback Amount

Customers in the lowest cashback quartile churn more than twice the rate of those in the top quartile. Those who receive low cashback perceive lower value from the platform and disengage faster.

Personalized cashback boosts for high-risk segments.

STRATEGIC RECOMMENDATIONS

Rank every customer by churn probability — then **match the campaign intensity to the risk level**

HIGH RISK - top 20%

typically: *Low Tenure + Complaint*

CHANNEL: SMS + Email

MESSAGE: *"We noticed a recent issue with your order. As an apology, here is 15% cashback on your next purchase - we want you to stay."*

TIMING: Within 24 hours of complaint

MEDIUM RISK - next 30%

typically: *Low Tenure, No Complaint*

CHANNEL: Push Notification + Email

MESSAGE: *"You've been with us for [X] days - here is a loyalty welcome reward just for you. Explore new categories with free shipping."*

TIMING: Day 7, 30 & 60 of onboarding

MONITOR- bottom 50%

typically: *Mid Tenure, Low Cashback*

CHANNEL: Monthly Newsletter

MESSAGE: *"Exclusive member offer: boosted cashback this week only. You're one of our valued customers - unlock your reward."*

TIMING: Monthly, auto-triggered

Key Principle: Prioritise outreach by Random Forest model score. Top 20% - immediate personal contact. Next 30% - automated personalized sequence. Rest - standard loyalty comms.
